

Does your organisation have a livestock supply chain involved in preparing, loading, receiving or outsourcing the transport of livestock in Australia?

If you do, then you may have regulatory and compliance requirements related to the **National Heavy Vehicle Law** and the Registered Industry Code of Practice: *Managing Effluent in the Livestock Supply Chain (Effluent Code)*.

Our platform and team of industry experts work with you to help you stay ahead of the curve.

In an Australian first, our product has digitised the management of key duties highlighted in the *Effluent Code*.

With CoRsafe, you can:

- empower your executive leadership to understand and fulfill due diligence obligations
- educate and oversee your internal and external stakeholders to seamlessly meet the latest industry standards.

Our team worked with leading industry associations and partners in livestock, as well as our legal partners Holding Redlich, to develop purpose-fit tools to help you stay current in managing your Chain of Responsibility obligations.

Explore these tools and platform enhancements more on the following page.

Platform enhancements

Here's a glimpse of how we've seamlessly integrated the Effluent Code into the CoRsafe platform.

Training

Supply Chain

Audits

Inspector

Training

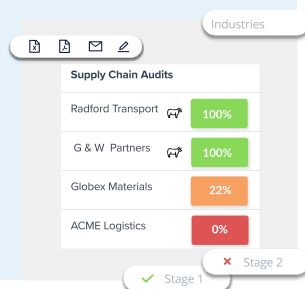

With CoRsafe's industry-specific suite of eLearning modules on the Effluent Code, your team and partners can better understand their CoR regulatory requirements.

Senior leaders and frontline managers have dashboard visibility to monitor completion rates, and facilitate adoption. From general awareness to detailed information for frontline staff preparing, loading, and receiving livestock – we've got you covered.

The following Effluent Code

Modules are offered in platform:

1. General Awareness:
Chain of Responsibility
2. Effluent Code: General Awareness
3. Preparing and Loading
Livestock for Transport
4. Receiving and
Unloading Livestock

Supply Chain Register

Our platform offers a detailed Supply Chain Register, providing you with compliance visibility across your chain. A simple filter lets you easily view partners by those involved in livestock transport and the compliance requirements they may have against the Effluent Code. The platform then invites those parties to complete Effluent Code specific self-audit questions. These insights help you to have informative discussions and interventions with your supply chain parties to remediate potential non-conformances.

Audits

The CoRsafe Audit standard now includes new criteria for assessing compliance with the Effluent Code for any parties in livestock.

With specialised training, our network of auditors are well placed to provide thorough evaluations for all supply chain partners.

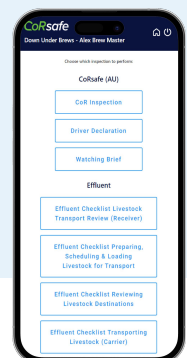

Inspector

The CoRsafe Inspector App replaces inefficient paper-based inspection checklists with a web-app enabling on-site personnel to easily and efficiently conduct and record site CoR compliance inspections. Empower your frontline livestock partners with checklists that incorporate the latest recommendations from the Effluent Code. These industry specific tools are mobile-friendly and enable your supply chain to document and report any issues in real-time.

Key checklists:

- **Transporting Livestock (Carrier):** Items to consider before you begin the freight task.
- **Preparing, Scheduling and Loading Livestock for Transport:** A pre-start list for livestock loading.
- **Livestock Transport Review (Receiver):** Have you got everything needed from the carrier?
- **Reviewing Livestock Destinations:** Is the site ready to receive livestock?

Are you compliant
with the **new**
Effluent Code
requirements?

Contact us today for a complimentary chat on how CoRsafe can help you monitor industry compliance across your Livestock chain.
